Business Outline*

The Most Consistent Money Making Trades

1. Divergence (Long and Short) 1 Min,3 Min,5 Min ,60 Min and Daily time frames. *****
2. Triple Stochastic Flag (Long and Short) 1 Min, 5 Min, Daily time frames. ****
3. 200 ema breakdown – Channel Line Bounce.
4. Oversold Stochastic Channel Line Bounce.

Disclaimer

Risk: Trading Futures, Options on Futures, and retail off-exchange foreign currency transactions involves substantial risk of loss and is not suitable for all investors. You should carefully consider whether trading is suitable for you in light of your circumstances, knowledge, and financial resources. You may lose all or more of your initial investment. Opinions, market data, and recommendations are subject to change at any time.

Trading is hard because we think to much, To have any chance of success you must consistently apply and follow a set of rules, This will eliminates the opportunity to think to much.

What are my Goals?

To take each qualified setup and apply the methodology. The money will come.

- * **Monthly – Goals are a setup for failure, it forces you to take trades that might not be optimal.**
- * **Yearly – with that said, my goal is to take every qualified trade set up as defined in my plan**
- * **Long Term – making money means nothing if you don't stay healthy, exercise your body too.**

What is my Approach?

After 23 years of trading I know that there are no sure things in trading but I also realize and found that there are area's in the market I have come to identify as HPS Zones. These areas give me an accurate entry and a larger then average move in the direction of the signal generated. These are the trades I only want to take. These specific set ups are my product. Each set up has a strict criteria for entry and exit along with a risk management zone (stop)

What is 'Divergence'

When the price of an asset and an indicator, index or other related asset move in opposite directions. In technical analysis, traders make transaction decisions by identifying situations of divergence, where the price of a stock and a set of relevant indicators.

Developed by George C. Lane in the late 1950s, the Stochastic Oscillator is a momentum indicator that shows the location of the close relative to the high-low range over a set number of periods. According to an interview with Lane, the Stochastic Oscillator "doesn't follow price, it doesn't follow volume or anything like that. It follows the speed or the momentum of price. As a rule, the momentum changes direction before price."

Type 1 Bottom (Bullish)

PRICES MAKING HIGHER HIGHS

STOCHASTICS MAKING LOWER HIGH

**BEARISH
DIVERGENCE**

George Lane was quoted about his stochastic indicator by saying "Stochastics measure the momentum of price. If you visualize a rocket going up into the air, before it can turn down, it must slow down. Momentum always changes direction before price."

Buy Side Divergence Lower Low Entry

Stage 1 on the divergence should have the stochastics under the 20 Line.

That low should bounce bring the stochastics back above 20

For the divergence to set up you want to see a pretty quick move with the price back lower then the previous low or at minimum a double bottom.

Stage 2 At the same time the stochastic hold above the 20 line. And then turn up putting in a higher low on the stochastics.

Optional but recommended criteria

5 Min and/or 60 Min stochastics should be moving up (preferred) off oversold.

The lower low should be capped with a reversal candle.

Divergence signals are best when lined up with lower channel lines (trend line)

Stage 1 on the divergence should have the stochastics under the 20.

Stage 2 you want to see a pretty quick move with the price back lower then the previous low or at minimum a double bottom.

At the same time the stochastic hold above the 20 line. And then turn up putting in a higher low on the stochastics

Sell Side Divergence Higher High Entry

Stage 1 on the divergence should have the stochastics over the 80 Line.

That high should pull back and bring the stochastics back under 80

For the divergence to set up you want to see a pretty quick move with the price back up and take out the previous high or at minimum a double top.

At the same time the stochastic hold under the 80 line. And then turn down putting in a lower high on the stochastics.

Optional but recommended criteria

5 Min and/or 60 Min stochastics should be moving down (preferred) off overbought.

The higher high should be capped with a reversal candle.

Divergence signals are best when lined up with upper channel lines (trend line)

DTRS Divergence Method Position Size Chart

When should I risk going up in size if I am starting with a Small account?

Answer use the 2% rule and depending on account size never take a position that is more then 2% of account value.

This might sound very small but it is actually double of what most strategies recommend. I am will to go to 2.5%

Here are some examples of what you should be looking at for size

Position Sizing for DTRS Divergence Strategy (HPS RAMBOT)

Getting the Biggest bang for your Buck, What and How to Use the Tradeometer .

With focus on the Emini Futures, Spy options, and Spy shares.

In this example I will be using the \$SPX of S&P 500 as our main underlying trading index. We will break down an equal comparison across each of them at the same price.

What we can trade when we apply our divergence method to the S&P 500 \$SPX

Let's look at each of our trading “Vehicles” and where they are in comparison to the SPX

ES_F (e-mini S&P futures)

SPY (The S&P 500 /SPDR S&P500 Trust ETF

SPY Options. Weekly's, Monthly's

SPY Leveraged ETF

(Ultra S&P500 – SSO – S&P 500 Index 2X the SPY)

(UltraPro S&P500 – UPRO – S&P 500 Index)

(Daily S&P 500 Bull 2x Shares – SPUU – S&P 500)

(Daily S&P 500 Bull 3x Shares – SPXL – S&P 500)

S&P 500 Index = 2188.93

\$es_f = 2188.25

Spy shares= \$219.30

Spy Weekly in the Money Calls = .35

WHAT YOU CAN GET WITH \$5,000

\$es_f: Discount broker 1 e-mini contract if you shop around you could pay as low as \$500.00 (Apex Futures has low initial margin so does Ninja Trader) or you can pay \$3600 at Interactive Brokers. So just to be realistic for a beginner lets say 2 Contracts

Spy Shares: 219.30/ Share (22 Shares) Used up the \$5K

Spy Options: Weekly expiration usually 1-2 day till expire .35/contract 1 Car = \$35.00 .35 x 100 (1 Contracts represents 100 shares) Lets just do 20 Contract Bringing the total cost to \$700.00

Weekly Options on the SPY

Remember the Money invested

(SPY Shares \$5000.00) ---22 Shares

(es_f \$2800,00)---2 Contracts

(Spy Options \$700.00)---20 Contracts

\$5000 in the Spy options would be 142 contracts

Spy Weekly Options at the time of the signal @ 1:24pm Moved .10 for a 28.24% move netting us a profit of \$200.00

SPY at the time of the signal @ 1:24pm Moved .33 for a .15 % move netting us a profit of \$7.26
